ABOUT US

Thanks to a deep experience in the design and production of burners, Ecoflam is nowadays a leading brand in the development of innovative combustion technologies, providing a comprehensive range of burners all around the world, from small burners for residential heating applications to high power burners dedicated to the industrial sector.

A long experience in developing customized burners for any requirement of the global market allows Ecoflam to guarantee reliability
and excellent performance in any application area, even the most critical.
By linking a strong innovative ability to a developing will, Ecoflam is always ready to extend its technical and commercial proposal.

The continuous research has led to the acquirement of a specific know-how on many industrial processes and the possibility to develop advanced technology burners and industrial combustion systems combining together the use of conventional burners and duct burners.

APPLICATIONS

Ecoflam industrial burners can be used in several production processes and with any fuel: natural gas, LPG, and lean gas in many mixtures.

Our combustion systems are developed and dimensioned to satisfy the needs of all the industrial thermal process on which they are installed.
The possibility of choosing within a wide range of products, the high flexibility of installation and the constant technical support and assistance allow our customers to find the correct solution to any problem of industrial combustion.

To do so, Ecoflam offers combustion systems throughout a proper selection of dedicated devices with the aim to satisfy the required specifications and offer the most appropriated solution for a wide range of application fields:

- **Dryers**
- **Textile**
- **Industrial painting and coating**
- **Metallurgical**
- **Environment**
- **Heat surface treatment**
- **Automotive**
- **Paper**
- **Automation and supervising**

SERVICE

Ecoflam is close to its Customers and, for this reason, is important for us to give all the necessary support, efficient and quick, whenever is necessary. Our service team has a long experience in field application and works together with our technical offices in order to provide the best solutions, following the customer from consulting and pre-sale to after-sale assistance.

Start-up and Commissioning
We are usually called to start-up our combustion system, and tuning our burners into the best configuration. This important task is fundamental to give to the customer the best performance in terms of emission levels and combustion efficiency.

Training of local personnel
Our engineers will transfer their knowledge to the customers, in order to guarantee the correct maintenance and management of the combustion system.

Evaluation and Revamping
Our company has the capabilities to evaluate your combustion system and all the equipment installed in order to provide technical service to upgrade your system.
A written relation with technical solutions, which enable our customer to choose the best way to act, based on its needs and financial possibilities, usually follows such activities.

MB LMT

Monoblock High Ratio Regulation

The “MB LMT” (Mono-Block Low Medium Temperatures) gas burner series, thanks to a light and handy structure combined with reduced overall dimensions, is ideal for all the installations requiring
a compact and silent combustion group with high turn-down ratio and a maximum temperature of process up to 600 °C.
The burner structure is in carbon steel, while the parts in contact with the flame are in refractory steel and in nickel-chrome alloys.
The gas train, the combustion air blower and the automatic burner control unit are located externally to the burner, with orientation that can be defined according to the installation requirements.
The completely automatic operation allows different regulation controls such as modulating on gas or modulating on ratio.
The air-fuel modulating version allows to reach a turn-down ratio of 30:1 with neutral combustion chamber.

FEATURES

- Direct spark ignition, ionization flame detection electrode (UV cell on request)
- Standard for natural gas (LPG and other gaseous fuel on request)
- Turn down ratio 30:1
- Single phase or 3 phase motor, 50/60 Hz
- Available as packaged execution, with gas train according to EN 746-2 (or other required), on right or left hand
- Easy to install, start and operate

APPLICATIONS

- Bricks, refractory: roller dryers, tunnel dryers, continuous and intermittent dryers
- Textile: stenters, dryers, polymerizers, printings dryers
- Surface treatment: painting dryers and kilns
- Paper: air heaters, for hood and dryers
- Converting: air heaters for rotogravures, flexographic and coupling and adhesive coating machines
- Food: cereal dryers, roasters, band ovens for bakeries
- Drying tobacco

MB LMT HCA

High Ratio Regulation

The “MB LMT HCA” (Mono-Block Low Medium Temperatures Hot Combustion Air) gas burner series, thanks to a light and handy structure combined with reduced overall dimensions, is ideal for all the installations requiring a compact and silent combustion group with high turn-down ratio and a maximum temperature of process up to 600 °C.
The burner structure is in carbon steel, while the parts in contact with the flame are in refractory steel and in nickel-chrome alloys.
The burner body is insulated and covered by a protective metallic layer to prevent heat dispersion. The burner is able to receive hot air as comburent till a maximum temperature of 250 °C and a minimum content of oxygen in the comburent air of 20%.
The gas train and the automatic burner control unit are located externally to the burner, with orientation that can be defined according to the installation requirements.
The comburent air is usually provided under pressure by a fan, not included in the supply.
Maximum thermal power is 700 kW (600.000 kcal/h) and minimum thermal power is 9 kW (9.740 kcal/h).
The completely automatic operation allows different regulation controls such as on/off, high-low flame, modulating on gas or modulating on ratio; this last control system allows to reach a turn-down ratio of 20:1 with neutral combustion chamber.

FEATURES

- Direct spark ignition, ionization flame detection electrode
- Standard for natural gas (LPG on request)
- Turn down ratio 20:1
- Available as packaged execution, with gas train valves according to EN 746-2 (or other required), on right or left orientation
- Easy to install, start and operate

APPLICATIONS

- Bricks, refractory: roller dryers, tunnel dryers, continuous and intermittent dryers
- Textile: stenters, polymerisers, printings dryers
- Surface treatment: painting dryers and kilns
- Paper: air heaters, for hood and dryers
- Converting: air heaters for rotogravures, flexographic and coupling and adhesive coating machines
- Food: cereal dryers, roasters, band ovens for bakeries
- Environment: dryers for biomass, movable conveyor dryers, belt dryers

HTC, HTS

Intensive High/Medium Speed

The “HTC” (with concrete casting cone) and “HTS” (with silicon carbide burner cone) gas burner are blown-air burners that can operate with natural gas, LPG, lean gas and gas with low calorific power (on request).
The operation can be automatic or semi-automatic, and the burners are equipped with electric ignition and detection electrode.
These burner series are classified as “high/medium speed gas burners”, with exhaust gases speed coming out from the flame cone from few m/s to 100 m/s, or even higher values according to the outlet diameter of the burner cone.
Combustion air temperature ranges from room temperature to 100 °C.
Because of its flexibility, these burners can be adjusted with a wide capacity range from 10:1 to 15:1 depending on the capacity of the burner.

FEATURES

- Direct spark ignition, ionization flame detection electrode (UV cell under request)
- Multifuel combustion head for natural gas and LPG
- Turn down ratio from 10:1 to 15:1 depending on the capacity of the burner
- Available as packaged execution, with gas train according to EN 746-2 (or other required), on right or left hand
- Easy to install, start and operate
- Supply available with the burner only or as dual bloc version

APPLICATIONS

- All types of kilns, suitable for oxidative, stoichiometric or reducing combustion:
  - roller kilns, tunnel kilns, intermittent kilns, melting kiln
  - continuous and intermittent dryers
- Iron metallurgic industry
- Surface treatment
- Printing and packing: air heaters for rotogravures, flexographic and coupling and adhesive coating machines
- Food: roasters
- Drying tobacco
- And furthermore, for any application which requires a wide regulation automatic gas burner, capable of operating in a strong vacuum or with strong counter-pressure

The above mentioned performance data are referred to a burner working at maximum power.
Pressures showed are guidelines only. Gas pressures are referred to methane and LPG.
Performance data and dimensions are guidelines only.

MVRT

Metallic Volumetric for Radiant tube

The “MVRT” gas burner is a blown-air burner that can operate with natural gas, LPG, lean gas and gas with low calorific power (on request).
The burner structure is painted casting, the body is made of iron, the bottom of aluminum, and the parts in contact with the flame are in refractory steel and nickel-chrome alloys.
The burner is equipped with ignition and flame detection electrodes, pressure switch to measure air and gas instantaneous flows, and flame indicating light.

FEATURES

- Direct spark ignition, ionization flame detection electrode
- Standard for natural gas (LPG and other gaseous fuel on request)
- Turndown ratio 10:1
- Available as complete version with gas train, according to EN 676 on right or left hand
- Easy to install, start and operate

APPLICATIONS

- Burner for radiant tube to heat liquid tanks

RANGE OVERVIEW

Model	Max output	
MVRT 70	70 kW	
MVRT 140	140 kW	
MVRT 280	280 kW	
MVRT 520	520 kW	
MVRT 800	800 kW	

Performance data and dimensions depends on the requirements of the installation.
Contact our sales network to receive more information on this burner range.

DBC LD MB, DBC LLD MB

Monobloc Air Duct Burners

Duct burners are ideal for generating volumes of clean, hot air.
The turn down ratio of the range goes from 10:1 to 15:1, depending on the model chosen.
Applications include oven, dryers, fume incinerators, and similar industrial equipment.
All models feature an integral combustion air blower mounted on the burner's steel case.
By supplying the correct air volume and pressure to the burner, the blower allows stable operation over a wide range of duct velocities without installing a profile plate around the burner.
Burner installation must be in suction (or slightly in pressure on demand).

FEATURES

- Can be direct spark ignited
- Does not require low-fire bypass air, eliminating the need for piping and check valve
- Simplified set-up with pressure taps for gas, air and chamber
- Inputs up to 750 kW for LD versions and 1500 kW for LLD versions
- Standard executions for methane (LPG and other fuels on request)
- Burner mounting arrangements include duct fixing flange and electrodes

With LLD modules:

Models	Capacity (kW)
DBC LLD MB 6“	75
DBC LLD MB 12“	150
DBC LLD MB 18“	225
DBC LLD MB 24“	300
DBC LLD MB 30“	375
DBC LLD MB 36“	450
DBC LLD MB 42“	525
DBC LLD MB 48“	600
DBC LLD MB 54“	675
DBC LLD MB 60“	750

With LD modules:

Models	Capacity (kW)
DBC LD MB 6“	150
DBC LD MB 12“	300
DBC LD MB 18“	450
DBC LD MB 24“	600
DBC LD MB 30“	750
DBC LD MB 36“	900
DBC LD MB 42“	1050
DBC LD MB 48“	1200
DBC LD MB 54“	1350
DBC LD MB 60“	1500

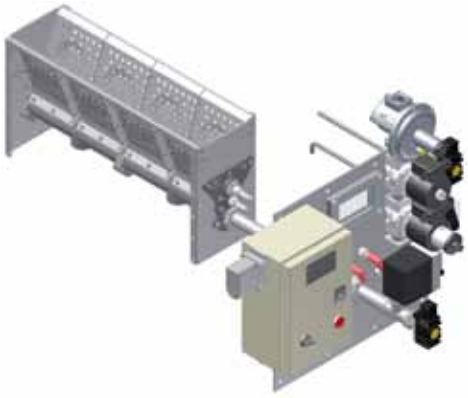
The size of each model indicates the length of the burner module expressed in inches

Power developed by a 12” module:
LLD = 150 kW
LD = 300 kW

Performance data and dimensions depends on the requirements of the installation.
Contact our sales network to receive more information on this burner range.

DBO

“Open Back” Monobloc Air Duct Burners



The air-draught burners series “DBO” is used in all those applications where it is required the direct heating of large quantities of air with small increase of temperature.
In this type of burners the combustion air is the same as the process air, and it is taken through the mixing head, by a suitable reduction of the duct section. The increase in speed resulting from the reduction of the duct section allows to have a correct and complete combustion.
The application of this kind of burner is possible only when free oxygen is higher than 19% and when in the process air there are no solvents nor other gases in such a concentration to cause uncontrolled combustion reactions.
This type of heating has an efficiency of 100% because the whole combustion energy is transferred directly to the process (direct exchange combustion).
This direct exchange gas burners series is extremely flexible and can be installed in a large number of industrial processes.

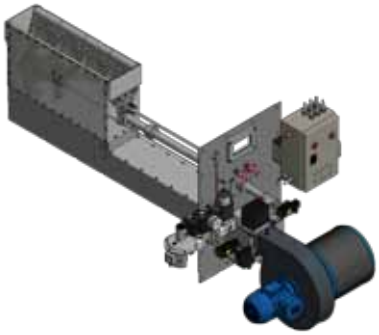
The burner consists of a plate to which the mixing head is fixed (positioned in the centre of the duct). Outside the plate there are the control board with flame control equipment, the interception and regulation gas train and the flame detector.
The mixing heads have a modular design to obtain a distribution of the power on a surface suitable to allow a correct mixing with the process air.
The installation must be done to give a speed of process air of 20 m/s with a pressure drop of approximately 2 mbar.

FEATURES

- Direct spark ignition or indirect by gas pilot integrated on the burner module
- Ionization flame detection by electrode or by UV cell
- Combustion head for natural gas (LPG or other fuels on request)
- Turn down ratio 10:1
- Available with thermoregulator
- Available as packaged execution, with gas train according to EN 746-2 (or other required)
- Easy to install, start and operate

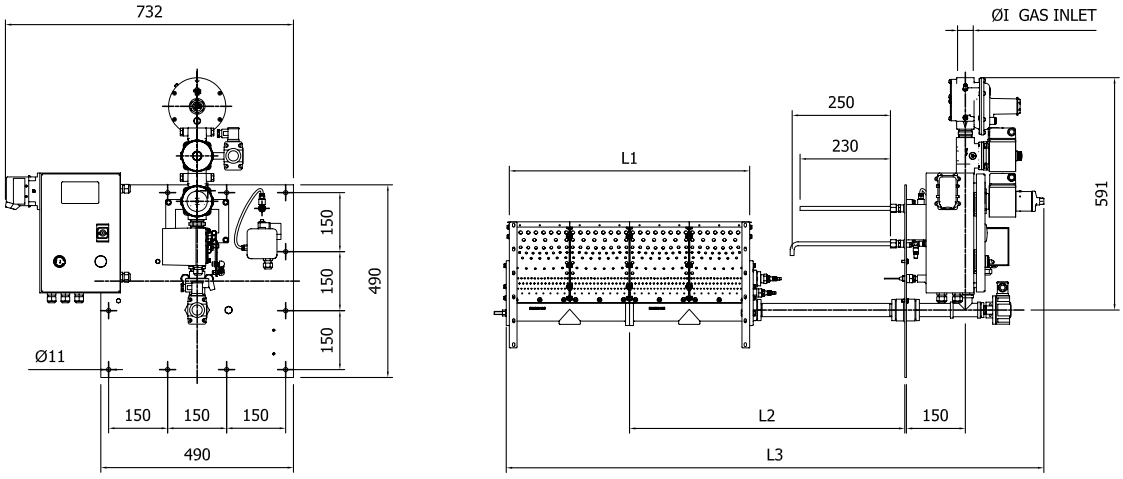
DBC

“Close Back” Monobloc Air Duct Burners



“Close Back” version of the Ecoflam duct burner range is also available.
Contact our sales network to receive more information on this burner range.

OVERALL DIMENSIONS



Model	ØI	L1	L2	L3
DBO/S LE LLD 12“	1“	307	548	1063

DBO/S LE LLD 48“	1“	1219	1004	1975

2 diameters of the gas supply pipe available depending on the capacity and the length of the burner:
S = small
0 = large

2 different widths of the air/gas mixing flaps:
LE = narrow
LLE = large

Power developed by each 12“ module:
LLD = 150 kW
LD = 300 kW
D = 450 kW

TECHNICAL DATA

Model	DBO 12	DBO 24	DBO 36	DBO 48
Minimum output	15 kW	30 kW	45 kW	60 kW
Maximum output	150 kW	300 kW	450 kW	600 kW
Fuel	Natural Gas (PCI 9,6 kW/Nm³) (LPG or other fuels on request)			
Gas supply pressure	70 ÷ 200 mbar			
Burner screen material	Ni-Cr Alloy			
Flame length*	150 mm	200 mm	250 mm	300 mm
Process air pressure drops*	2 mbar			
Upstream burner max temperature	200 °C			
Downstream burner max temperature	300 °C			
Minimum process air oxygen percentage	17%			
Weight (burner cone included)	33 kg	39 kg	46 kg	50 kg

*: with process air speed of 20 m/s

The above mentioned performance data are referred to a burner working at maximum power.
Pressures showed are guidelines only. Gas pressures are referred to methane gas.
Performance data and dimensions are guidelines only.

SSDBS

Self standing air duct burners

Single line

The air duct burners series “SSDBS” is used in every type of industrial processes where it is required the direct heating of ducted air.
The package is composed by a modular burner properly dimensioned and assembled in order to guarantee the best heat exchange between the process air and the combustion products.
At the bottom part of the burner body it will be created an air box that will compose the structure of burner. The air box, made with a modular structure like the burner itself, is composed by reinforced stainless or carbon steel and houses the special process air fans, properly dimensioned for the duct burner feeding.
The gas train is fixed to the burner structure under the airbox and is housed along the entire length of the burner.
The junction box containing the transformer igniter and the terminal board is fixed on a side of the burner structure.
The control panel is supplied separately from the burner (not assembled to the structure) and complete with the multi-polar wire for the connection to the junction box (standard cable length 5 m, other lengths on request).
The ignition of the duct burner is preferentially done with a pilot burner; the two main steps, ignition and operation, are managed by the flame control installed inside the control panel.
The burner unit is supplied with supporting foots for a vertical installation.
No installation works are required in place except connection to gas and electricity.

i Capacity developed on single burner only

FEATURES

- Ignition of the main burner through integrated pilot
- Flame detection with ionization electrode (one for length up to 1200 mm, two for higher burner lengths) or with UV cell (optional)
- Standard executions for methane (LPG and other fuels on request)
- Regulation: gas modulant, with by-pass for discharge procedures of the dryer
- Thermoregulator (optional) floating or analog positionable on the control board
- Complete version with gas train according to EN 746-2 (other regulations if required) and control panel
- Max inlet comburent air: 70°C

APPLICATIONS

- All types of application in which a large exchange surface between exhaust gases and process air is required and to have a fast and uniform mixing, in particular cereals dryers
- All those applications in which a direct exchange gas burner at large regulation and automatic working is required

REGULATION TYPE

Gas Modulant: provides for the adjustment of the fuel only via floating or analog (optional) motorized valve, while the flow rate of the process air is calibrated to allow the combustion at maximum capacity.
Max. ÷ min. ratio 10:1

SSDBD

Self standing air duct burners

Dual line

The air duct burners series “SSDBD” is used in every type of industrial processes where it is required the direct heating of ducted air.
The package is composed by a modular burner properly dimensioned and assembled in order to guarantee the best heat exchange between the process air and the combustion products.
At the bottom part of the burner body it will be created an air box that will compose the structure of burner. The air box, made with a modular structure like the burner itself, is composed by reinforced stainless or carbon steel and houses the special process air fans, properly dimensioned for the duct burner feeding.
The gas train is fixed to the burner structure under the airbox and is housed along the entire length of the burner.
The junction box containing the transformer igniter and the terminal board is fixed on a side of the burner structure.
The control panel is supplied separately from the burner (not assembled to the structure) and complete with the multi-polar wire for the connection to the junction box (standard cable length 5 m, other lengths on request).
The ignition of the duct burner is preferentially done with a pilot burner; the two main steps, ignition and operation, are managed by the flame control installed inside the control panel.
The burner unit is supplied with supporting foots for a vertical installation.
No installation works are required in place except connection to gas and electricity.

i Capacity developed on two parallel burners

FEATURES

- Ignition of the main burner through integrated pilot
- Flame detection with ionization electrode (one for length up to 1200 mm, two for higher burner lengths) or with UV cell (optional)
- Standard executions for methane (LPG and other fuels on request)
- Regulation: gas modulant, with by-pass for discharge procedures of the dryer
- Thermoregulator (optional) floating or analog positionable on the control board
- Complete version with gas train according to EN 746-2 (other regulations if required) and control panel

HGC

Hot air generators

The “HGC” air draught generator line is used in all those applications where it is required a direct air heating during industrial process.
The assembly is made up of a duct section with suitable materials resistant to temperature and/or treated fluid, a “DBC” burner correctly dimensioned and assembled, in order to allow the best exchange between combusted gas and process air.
External to the duct there are the control board with flame control equipment, the interception and regulation gas train and the flame detector.
Comburent air can be supplied by an electro-blowing fan suitable dimensioned, which carries the comburent to the mixing head through a duct.
The combustion air can be obtained also by process, using an “Open Back” module (DBO). In this case, a part of the process fluid is conveyed to the mixing head by means of an increase in speed, due to a narrowing of the channel in which the burner is located. This application is possible only when oxygen level is higher than 19% during the process fuel.
This direct exchange gas burner series is extremely flexible and allows an installation in a large number of operating conditions, classified according to the working temperature and to the operation type of fuel and comburent flow.

“Open Back”:	T max (upstream burner)	= 100 °C
	T max (downstream burner)	= 300 °C
“Close Back”:	T max (upstream burner)	= 200 °C
	T max (downstream burner)	= 500 °C

FEATURES

- Main module direct electrical ignition by electrode; or indirect by a pilot incorporated in burner structure
- Flame detection with ionization electrode or UV cell
- Standard executions for methane. LPG and other gases on request
- Gas modulant regulation
- Available as complete version with gas train and control board in compliance with EN 746-2 (other regulations if required)

APPLICATIONS

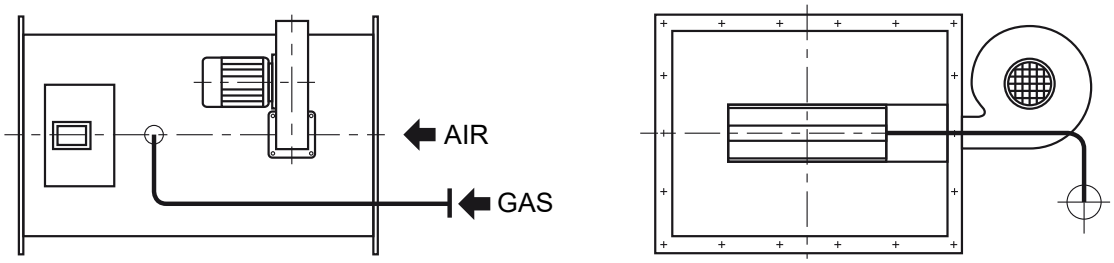
- All types of application in which a large exchange surface between combustion gas and process air is required, and it’s necessary a fast and uniform mixing
- Ceramic, bricks, refractory: intermittent and continuous dryers
- Surfaces treatment: painting kilns, enamelling kilns and dryers
- Printing and packing: air heaters for rotogravures, flexographic and coupling and adhesive coating machines
- Food: cereal, fodder and tobacco dryers, roasters
- All intermittent and continuous dryers

REGULATION TYPE

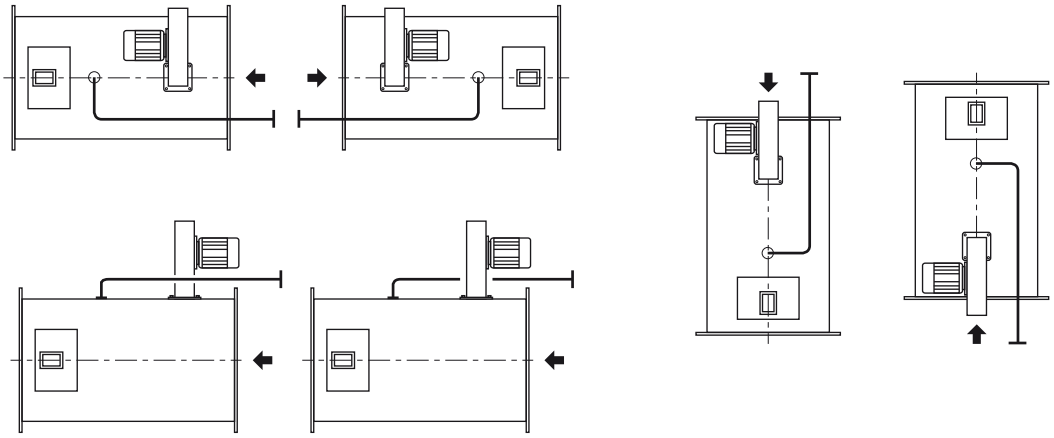
Gas Modulant: provides for the adjustment of the fuel only via floating or analog (optional) motorized valve, while the flow rate of the combustion air is calibrated to allow the combustion at maximum capacity.
Max. ÷ min. ratio 10:1

All the typologies above mentioned refer to generators with combustion air supplied by an electro-blowing fan. In case the installation is an “Open Back” type, any variation in the process air flow affects the speed of the combustion agent, that should be consequently adjusted by the means of diaphragms, with the aim to guarantee a speed between 10 and 20 m/s all along the length of the burner head.

GENERATOR CONFIGURATION



Orientations showed in the pictures below are the most commonly used, but they can be changed following the customer requests in order to satisfy the installation requirements.
Our Technical Service is always at your disposal for the necessary explanations and assistance to optimize the installations.



Examples of applications

TEXTILE

PAPER

DRYERS

INDUSTRIAL PAINTING/COATING
AUTOMOTIVE

HEAT SURFACE TREATMENT

METALLURGICAL

AUTOMATION AND SUPERVISING

ENVIRONMENT

FOOD

TEXTILE

Working temperatures: 100°C ÷ 250°C
Types of burners:
- Radiant tube burners
- High ratio monoblock burners

Model of the main burners:
- MVRT (properly equipped)
- MB LMT

Type of combustion systems:
- Systems of more burners working together (possibility to order the radiant tube also)

- **Machine:** dryer
- **Purpose:** drying of textile printing
- **Burner:** MB LMT TR 360
- **Total power installed:** 360 kW

- **Machine:** dryer
- **Purpose:** drying of textile printing
- **Burner:** MB LMT TR 235
- **Total power installed:** 235 kW

- **Machine:** stenter
- **Purpose:** drying of textile printing
- **Burner:** MB LMT 235
- **Total power installed:** 235 kW

PAPER

Working temperatures: 100°C ÷ 200°C
Types of burners:
- Radiant tube burners
- High ratio monoblock burners
- Duct burners

Model of the main burners:
- MVRT (properly equipped)
- DBC / DBO / HGC

Type of combustion systems:
- systems of more burners working together
- duct burners systems equipped for the specific use

- **Machine:** Tissue Yankee Hood
- **Purpose:** drying of “Tissue” paper
- **Burner:** HGC 2100 SX
- **Total power installed:** 2440 kW

- **Machine:** oven for resin drying
- **Purpose:** drying resin for plastic laminates
- **Burner:** MB LMT TR 360
- **Total power installed:** 360 kW

- **Machine:** oven for resin drying
- **Purpose:** drying resin for plastic laminates
- **Burners:** 3x MB LMT TR 360
- **Total power installed:** 1440 kW

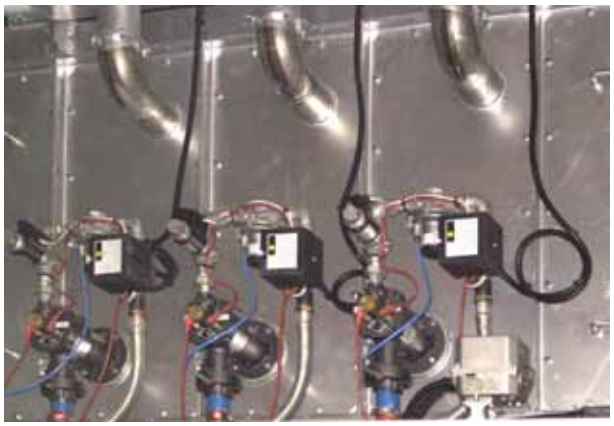
DRYERS

Working temperatures: 80°C ÷ 250-300°C
Types of burners:
- Duct burners
- High ratio monoblock burners
- Medium velocity burners

Model of the main burners:
- DBC / DBO / HGC
- MVRT

Type of combustion systems:
- hot gas generator
- systems of more burners working together

- **Machine:** dryer
- **Purpose:** drying of rock wool
- **Burners:** 5x HGC 750 LB40 O-SX
- **Total power installed:** 1440 kW



- **Machine:** dryer
- **Purpose:** drying of rubber molds
- **Burners:** 3x MVRT 140
- **Total power installed:** 480 kW

- **Machine:** painting dryer
- **Purpose:** drying of coated sheets
- **Burner:** DBO 1200
- **Total power installed:** 1200 kW

INDUSTRIAL PAINTING / COATING AUTOMOTIVE

Working temperatures: 20°C ÷ 250°C ÷ 850°C
Types of Burners:
- Duct burners
- High ratio monoblock burners

Model of the main burners:
- DBC / DBO / HGC
- MB LMT

Type of combustion systems:
- supply of big surface duct burner fitted for large quantity of process air to be installed at service of the preparation and painting zones, customized of the main burners suitable for the oven installation
- incinerator systems for VOC and other toxic waste gases

- **Machine:** drying oven
- **Purpose:** drying of painting of plastic parts
- **Burner:** MB LMT 360
- **Total power installed:** 360 kW

- **Machine:** hot air supply unit for spray booth
- **Purpose:** drying of painting of metal parts
- **Burner:** DBO 2600
- **Total power installed:** 2600 kW

- **Burner:** DBO 2600
- **Total power installed:** 2600 kW

HEAT-SURFACE TREATMENT

Working temperatures: 100°C ÷ 600°C
Types of burners:
- Radiant tube burners
- Medium velocity burners
- Duct burners

Model of the main burners:
- MVRT (Properly equipped)
- HTC / HTS
- DBC / DBO / HGC

Type of combustion systems:
- systems of more burners working together (possibility to order the radiant tube indirect and for immersion also)
- single burners fully equipped and ready for operating

- **Machine:** paint dryer
- **Purpose:** drying of painted parts finishing
- **Burner:** DBC 24
- **Total power installed:** 300 kW

- **Machine:** paint dryer
- **Purpose:** air treatment
- **Burner:** DBC 1500
- **Total power installed:** 1500 kW

- **Burner:** HTC 3500 S/0
- **Total power installed:** 3500 kW

METALLURGICAL

Working temperatures: 600°C ÷ 900°C
Types of burners:
• Medium/High velocity burners
Model of the main burners:
• HTC / HTS properly equipped
Type of combustion systems:
• Systems of more burners working together

- **Machine:** cementation oven
- **Purpose:** heat treatment of mechanical parts
- **Burners:** 4x HTS 300 S/90
- **Total power installed:** 2000 kW

- **Machine:** annealing oven
- **Purpose:** cylinder annealing
- **Burners:** 16x HTS 190 S/90
- **Total power installed:** 1650 kW

- **Machine:** annealing oven
- **Purpose:** cylinder annealing
- **Burners:** 16x HTS 190 S/90
- **Total power installed:** 1650 kW

AUTOMATION AND SUPERVISING

Working temperatures: any
Types of burners: any
Model of the main burners: any

Description:
Control panels engineered for the management of the all different industrial systems, combustion or automation, are well integrated and showed on our synoptic (local control trough touch-screen or remote control trough personal computer)
