CUTTING-EDGE BURNERS FOR HEATING AND INDUSTRIAL APPLICATIONS

Innovative soul

Being a specialist in burners conception and manufacturing, ELCO is nowadays one of the leaders in the combustion technology. By linking a strong innovative ability to a developing will, ELCO conceives performing and reliable burners that respect the environment as well as corresponding services, in order to establish a lasting relationship with its customers.

The mission

ELCO always looks for the best technologies and develops new ones to improve the efficiency of its solutions. Our R&D Laboratories are committed to develop innovative technological solutions allowing to:

- optimize the running of the installations lowering the use of primary energy;
- ease professional's work improving human machine interface and maintenance;
- preserve the environment lowering acoustic and exhaust gas emissions.

Product range

Our experience at combustion disposal
in a complete range of burners from 11 kW to 80 MW:

VECTRON

11 - 2300 kW
Gas, light oil and dual fuel

PROTRON

15 - 550 kW
Gas and light oil

NEXTRON

250 - 11200 kW
Gas, light oil and dual fuel

EK EVO

250 - 13000 kW
Gas and dual fuel

N

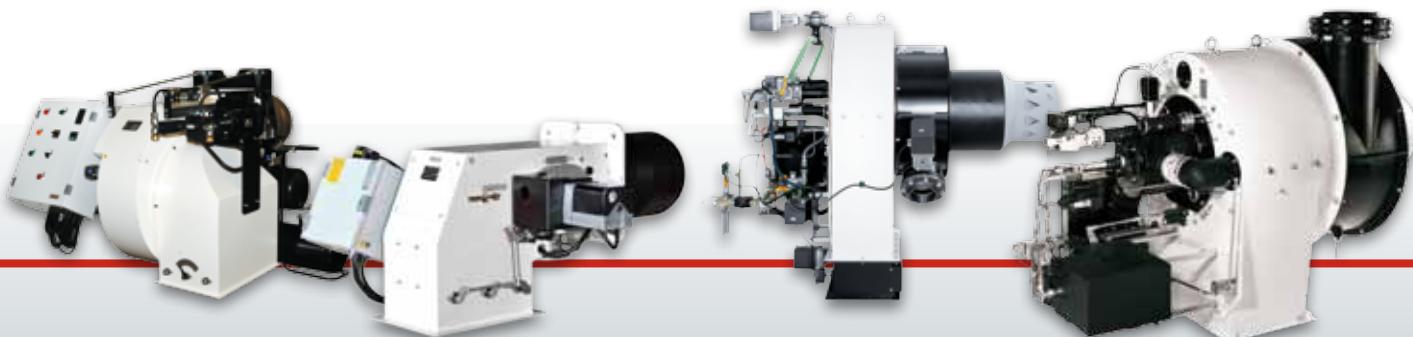

1300 - 22000 kW
Gas, light oil and dual fuel

Professional staff

Taking advantage of a staff composed of technicians and engineers with a long experience, ELCO is able to provide professional support to the customer in order to define together the best solution and to develop and manage the project through its entire life-cycle.
ELCO Service activities define the standards in the market and each customer can rely on high performance and reliable products.

HO/GHO-TRON

68 - 17000 kW
Heavy oil and
dual fuel

D-TRON

230 - 34000 kW
Gas, light oil, heavy oil
and dual fuel

EK-DUO

600 - 16000 kW
Gas, light oil and
dual fuel

RPD

500 - 80000 kW
Gas, light oil, heavy oil
and dual fuel

Worldwide network

Capitalising more than 80 years of working experience, ELCO has been capable to build loyal partnerships and today can count on reliable Partners all over the World.

Combining an instinctively global perspective with a genuinely multicultural approach, ELCO today offers skilled and experienced experts available in more than 70 Countries.

In Europe

3 production plants

6 commercial branches

Strong commercial presence through a network of reliable dealers and partners

Worldwide

2 Sales Offices in Russia and China

Distribution in over 70 Countries

ELCO is developing a worldwide network of valuable Service Partners, consisting of well-trained local engineers, to carry out its service operations.

Time to market

To promptly deal with the requests of an ever changing market, ELCO has adopted a finished products and spare parts warehouse of over 8000 square meters.

Quick response to customer requests and consistent warehouse availability allow to reduce the delivery time and give a better support to the end user.

Reliable supply of spare parts

Spare parts have always had a great importance inside the ELCO world. Considering the high amount of parts involved in every single product, some of these parts might naturally need to be substituted. ELCO can count on a International network offering original spare parts in order to guarantee the highest quality, reliability and safe continued operation of the appliance.

Solutions for every need

A long presence in the international market has allowed ELCO to build a strong experience in burner customization and to develop products that are able to guarantee reliability, quality and high performance even in the most extreme working conditions.

Competent advice

Your contacts at ELCO and its partners are recognized experts with years of experience.

Our worldwide support starts from concept creation to planning, design and project management up to commissioning and on-going operation of the plant throughout its life cycle.

As an ELCO customer, you can rely on your installation to perform reliably. Our guarantee is backed up by a service that sets standards in our field.

References

ELCO has been chosen as the ideal partner from worldwide companies to design installations where technical specifications and environmental conditions require a specific design.

In the next pages you will find a selection of our international references.

Technologies and Systems

To constantly improve its products, ELCO is committed to develop innovative technological solutions allowing to optimize the running of the installations, to ease professional's work, and naturally to preserve the environment. In order to provide quick responses to its market's exigencies, the range of ELCO burners is entirely conceived around a consistent combination of Systems.

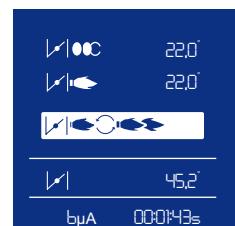

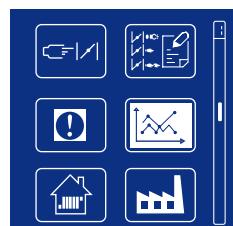

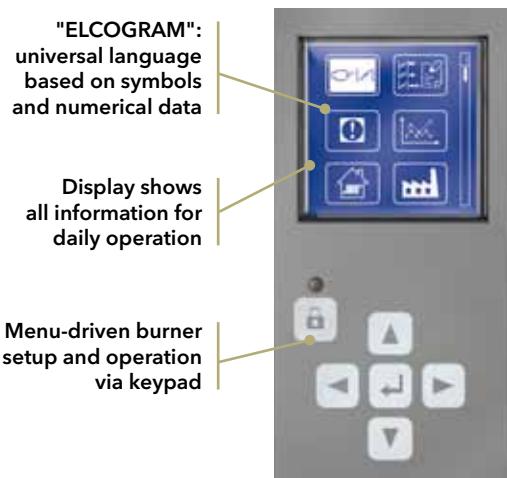

MDE2 System

Permanent communication of information easy to use

Equipped with the MDE2 System, the universal language Elcogram and the 5-button keypad, ELCO burners adjust themselves and constantly communicate to professional operators:

- real time information about each ignition and during the running;
- statistical information about burner operation recorded during the whole year before the maintenance operations.

Elcogram, a universal language

As ELCO products are distributed worldwide, the company has developed a universal language composed of pictograms and numerical data. The pictograms use the majority of the symbols used on the wiring diagrams which are recognised and understood by all Nations. This ensures that information is easier to read than ever before.

GEM System

Electronic burner control: high safety and low costs

The use of electronic technologies in burner control systems helps to reduce running costs, improve reliability of operation and lower pollutant emissions. The electronic combustion manager used on ELCO burners are responsible not only for burner control (formerly the task of the traditional automatic combustion control unit) but also for fuel/air regulation. Data stored electronically has replaced the mechanical characteristic curve and help to achieve an unprecedented level of precision in air/fuel ratio regulation across the burner's entire control range, a prerequisite for efficient, energy- and cost-saving operation.

The GEM System controls the position of one or more activators simultaneously.

The servomotors of the air flow and oil components are controlled by a microprocessor which contains set points defined for each load curve. An additional advantage of the GEM is that it provides specific information on all the commands and states of the overall system: these can be accessed directly or by remote control.

The digital programming is user-friendly, it is carried out through the display of the MDE2 System or through a PC by using a simple procedure facilitated by easy instructions in a clear language.

AGP System

An outstanding technology for gas burners

Developed and produced by ELCO, the AGP System (proportional air-gas) provides:

- perfect stability of the air-gas mixture;
 - a constantly high CO₂ content over the whole burner power range;
 - precise control of air excess, which is important for high-efficiency operation, in particular for condensing generators.
- The AGP measures: the gas pressure downstream of the gas train, the air pressure behind the flame holder, the furnace backpressure.

Any variations in the three pressures are immediately and simultaneously recorded by the system which automatically restores the correct gas/combustion air ratio.

AGP maintains a constant gas/combustion air ratio even in the presence of:

- positive or negative variations in the gas pressure;
- variations in air flow due to changes in the electrical supply voltage or fouling of the ventilation system;
- variations in the furnace and flue draft pressure on start-up and during load changes.

Variatron

Speed regulation: noise reduction and energy saving

To improve the performance of heating or industrial systems, ELCO applies Variatron (fan speed control). Conventionally, the air in modulating burners is regulated by an air flap. In the partial load range, a large amount of the air pressure generated by the ventilator goes to waste.

With speed regulation, the speed of the combustion-air fan is varied continuously depending on the burner output required. Full speed is reached only at maximum burner output. In the predominant partial load range, the lower speed translates into significant reductions in power consumption and noise emissions. The Variatron operates in phase with the air damper both with the GEM System and with the AGP System, which guarantees a combustion with minimum air excess by continuously monitoring all operating conditions.

Application of the Variatron to ELCO burners results in:

- electrical consumption savings of the order of 50%;
- turndown ratio of up to 1:10, resulting in perfect adaptation to system requirements and improvement in average seasonal efficiency, in particular with condensing or low-temperature boilers or specific processes;
- silent start-up and average overall noise reduction between 2 dB(A) (at maximum power) and 12 dB(A) (at minimum power).

Low Noise System

Increase the comfort in-use and protect the environment

Among all the harmful things that men have to bear with every day, the most annoying is noise, which is difficult to reduce and expensive to get rid of.

This is the reason why ELCO has developed quiet burners both by selecting sound absorbent materials, and by treating each noise sources internally. The main noise comes from the air intake and the air mixing in the fan wheel: all the ELCO burners are equipped with a sound trap on the air intake channel leading to the fan.

This brings the acoustic level to a compatible value in respect of the environment.

Technologies and Systems

ELCO R&D Laboratories have capitalised more than 80 years of experience in the field of standard burners (with normal emission) in order to develop a parallel range of low emissions burners. In addition to scrupulously respecting the limits prescribed by European directives regulating pollutant emission, the goal of ELCO is to guarantee values largely below those established by regulations.

In order to reach these results the low NOx burner range takes advantage of innovative combustion technologies.

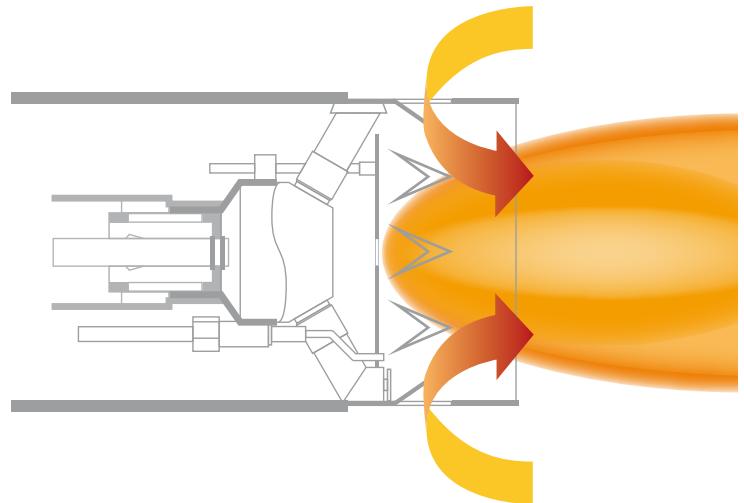

Diamond Head Low emissions and reliable operation

The principle of the Diamond Head gas combustion is based on the internal recirculation of the combustion flue gases. These are partially drawn into the base of the flame via triangular openings positioned at the end of the combustion head.

The position and geometry of the gas injectors are such that a significant quantity of combustion flue gas is drawn in and rapidly mixed with air and gas at the root of the flame. This mixture crosses the main reaction area, slowing the combustion, which resulted in lowering the main flame temperature.

The result of this staging combustion is a significant reduction in the formation of thermal nitrogen oxides.

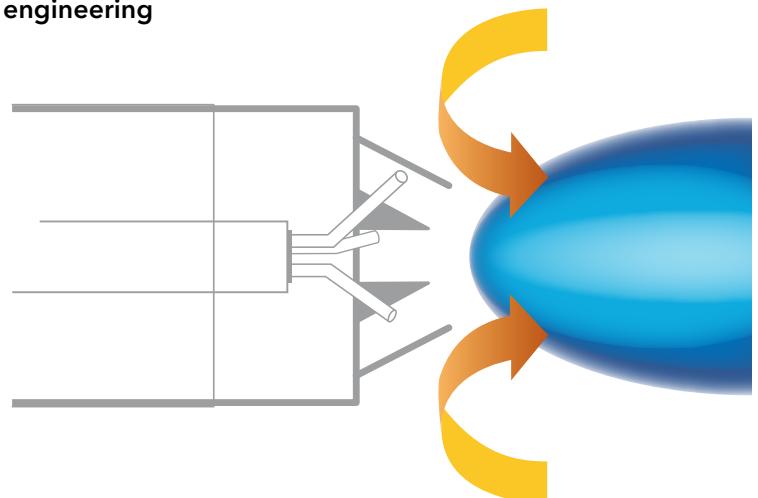

The advantage of this internal recirculation technique is an automatic adjustment to the quantity of recycled combustion flue gases: the volume of the flame is always as low as possible, which has a very minor effect on the nominal power of the generator, unlike external recirculation systems.

Free Flame The pinnacle of low-polluting burner engineering

The principle of the Free Flame oil combustion is based on rapid gasification of the fuel by recirculating the combustion gases internally and allows the fuel-air to mix quickly. Once the fuel has been vaporized, it will burn and stabilize 30 centimetres from the combustion head.

The flame appears to "float freely" hence the name "Free Flame". The heat absorbed by the gasification oil will cause a significant drop in the flame's temperature and a decrease in the formation of thermal nitrogen oxide.

Technical assistance

Commissioning

For safe and efficient operation of your burner system it is very important that the burner is commissioned by an expert. The combustion will be optimally adjusted over the whole power range of the burner, and all the safeties will be tested. Of course you will receive a report. ELCO's service technicians are able, like no other, in performing this job adequate and competent, to run your installation worry-free.

Maintenance and inspection

The burner is a crucial part of the installation. To keep your installation in good conditions, it is important to maintain the burner periodically. It is also very important to inspect all the safeties to ensure that your system operates safely.

Fortunately, you can rely on the professional services of ELCO which can perfectly perform this service for you.

The Burner Academy

In order to respond to the needs of our customers we created the Burner Academy, a real school where the know-how of our technicians is diffused to our partners.

We provide the opportunity for boiler room personnel, operators and engineers to attend a series of training sessions carried out on our test bench by highly qualified instructors, who held the courses in English, German, French, Italian and Dutch language.

The Burner Academy uses various training locations where boilers are installed and where people can be trained in theory and in practice. We offer courses at different levels and also the possibility to handle all your needs in a customer-specific training.

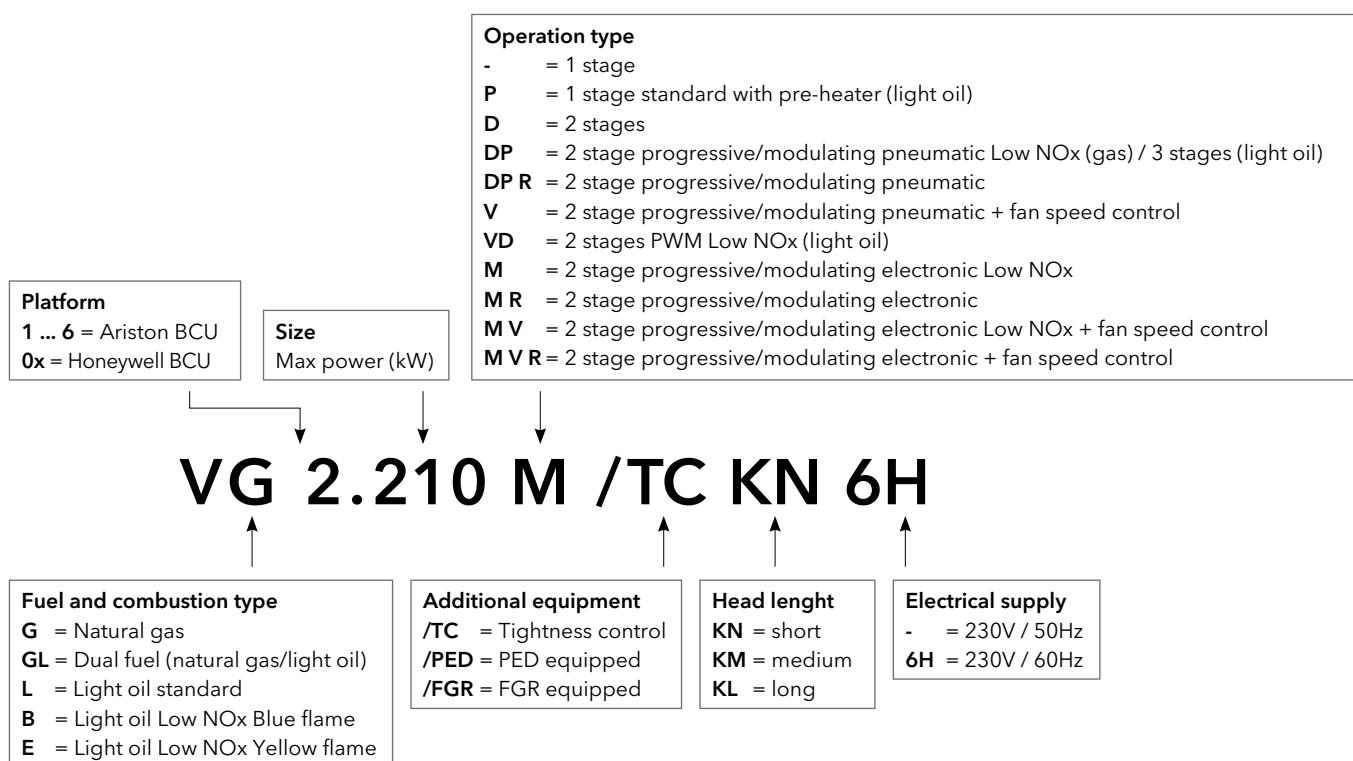

Worldwide Service Network

In Western Europe, ELCO has a well organized service network.

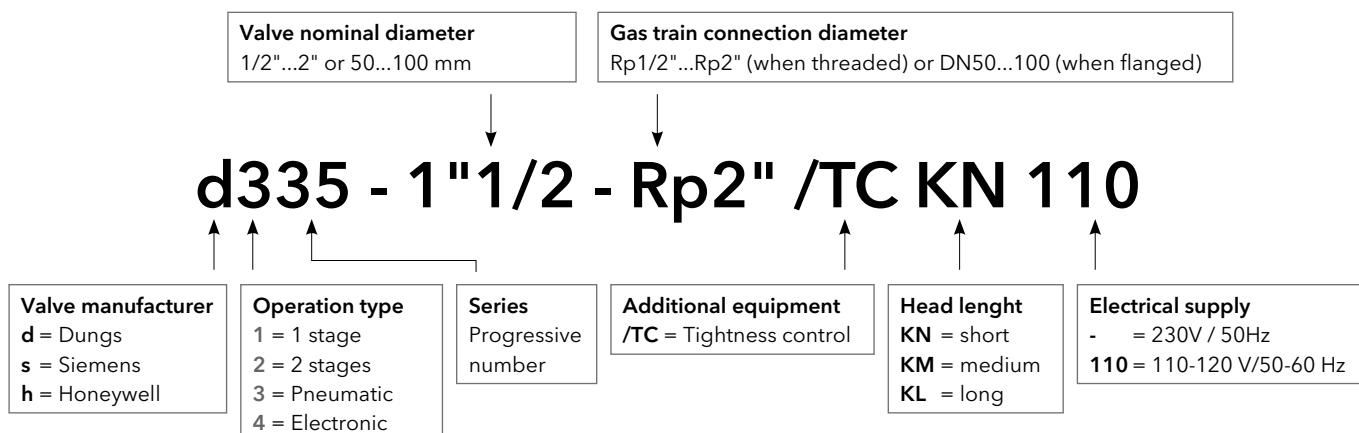

Outside Western Europe ELCO uses a network of partners, consisting of well-trained local engineers, to carry out its service operations. These technicians are able to perform both commissioning and local service and they do it in a very professional way.

Designation

Burner body

Gas train

Other burner versions

- [60] 60 Hz version
- [TC] Version with tightness control
- [V_{BF}] Versions for continuous ventilation and post-ventilation
- [PED] PED version for continuous operation
- [FGR] FGR version (ultra low NOx)

Gas range

Main features

- Fuels:
 - natural gas (G20/G25, $H_u = 8,83 \dots 10,35 \text{ kWh/m}^3$);
 - LPG (G31, $H_u = 25,89 \text{ kWh/m}^3$).
- Cubic type architecture allowing optimal accessibility, maximum compactness, minimum weight.
- Complete electrical equipment in the body of the burner with MDE2 System and display: this ensures that information is easier to read than ever before, constantly giving real-time information to professional operators, during the commissioning, the operation and at each operation cycle.
- Quiet ventilation and reduced electrical consumption.
- Closing of the air flap at burner shut-down.
- Maintenance operation are simplified: the combustion parts can be quickly removed, easily cleaned and, even when they are disassembled, they easily get back to their position after all the servicing work.
- Gas train factory assembled and tested for tightness and electrical security.
- All products are in compliance with EN676 European standards and with the following directives:
 - 2014/35/UE Low Voltage Directive
 - 2014/30/UE EMC Directive
 - 2009/142/CE Gas Appliances Directive
 - 2006/42/EC Machinery Directive

OTHER AVAILABLE VERSIONS

60 | 60 Hz version

V_{avr} | Versions for continuous ventilation and post-ventilation**SCOPE OF SUPPLY**

The burner is delivered in its package complete with:

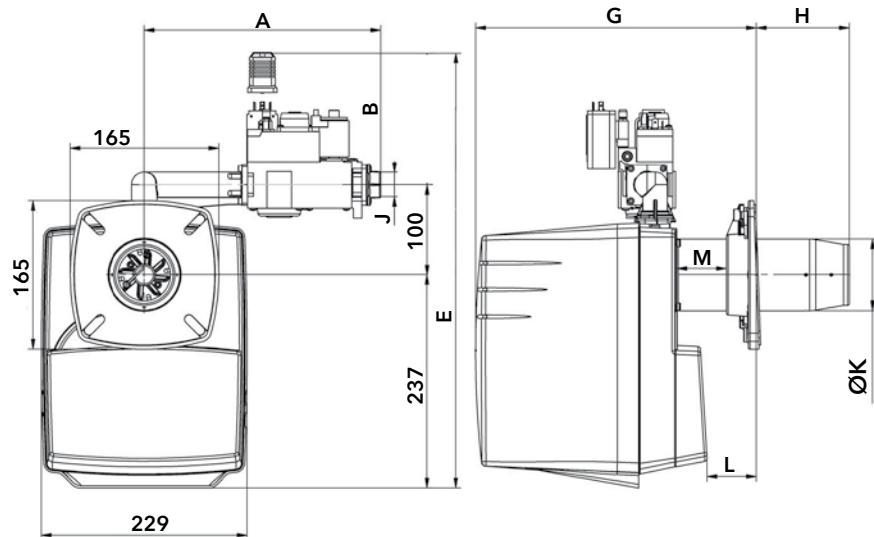

- 1 gas connection flange
- 1 compact gas train with gas filter; the gas filter is built-in for threaded valves (up to 2") and separated for flanged ones (DN65/80/100)
- 1 burner flange with insulation
- 1 bag containing installation fittings
- 1 bag containing technical documentation (instruction manual, technical data, electrical diagram, exploded view and spare parts list)

300 ... 1900 kW

2 stage progressive/modulating pneumatic (Low NOx class 3)

- Fuels:** natural gas (G20/G25, $H_u = 8,83 \dots 10,35 \text{ kWh/m}^3$);
LPG (G31, $H_u = 25,89 \text{ kWh/m}^3$)
- Emission class:** Low NOx class 3 (<80 mg/kWh) according to EN676
- Operation:** two stage progressive or modulating with the installation of a power regulator and dedicated probes (see pag. 156)
- Protection level:** IP 21

**TECHNICAL DATA**

Test conditions conforming to EN676 - Temperature: 20°C - Pressure: 1013,5 mbar - Altitude: 0 m a.s.l.

60 60 Hz version

V_{avr} Versions for continuous ventilation and post-ventilation**SCOPE OF SUPPLY**

The burner is delivered in its package complete with:

- 1 burner head with flange seal and securing screws
- 1 compact gas train with gas filter; the gas filter is built-in for threaded valves (up to 2") and separated for flanged ones (DN65/80/100)
- 1 bag containing installation fittings
- 1 bag containing technical documentation (instruction manual, technical data, electrical diagram, exploded view and spare parts list)

SCOPE OF SUPPLY

The burner is delivered in its package complete with:

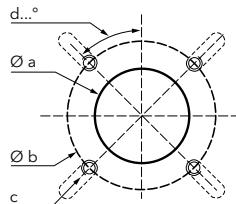

- 1 gas connection flange
- 1 compact gas train with gas filter; the gas filter is built-in for threaded valves (up to 2") and separated for flanged ones (DN65/80/100)
- 1 burner flange with insulation
- 1 bag containing installation fittings
- 1 bag containing technical documentation (instruction manual, technical data, electrical diagram, exploded view and spare parts list)

SCOPE OF SUPPLY

The burner is delivered in its package complete with:

- 1 burner head with flange seal and securing screws
- 1 compact gas train with gas filter; the gas filter is built-in for threaded valves (up to 2") and separated for flanged ones (DN65/80/100)
- 1 bag containing installation fittings
- 1 bag containing technical documentation (instruction manual, technical data, electrical diagram, exploded view and spare parts list)

SCOPE OF SUPPLY

The burner is delivered in its package complete with:

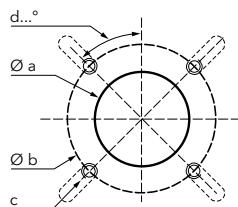

- 1 burner head with flange seal and securing screws
- 1 compact gas train with gas filter; the gas filter is built-in for threaded valves (up to 2") and separated for flanged ones (DN65/80/100)
- 1 bag containing installation fittings
- 1 bag containing technical documentation (instruction manual, technical data, electrical diagram, exploded view and spare parts list)

SCOPE OF SUPPLY

The burner is delivered in its package complete with:

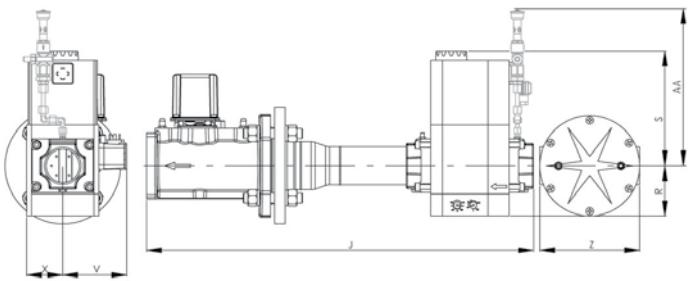

- 1 burner head with flange seal and securing screws
- 1 compact gas train with gas filter; the gas filter is built-in for threaded valves (up to 2") and separated for flanged ones (DN65/80/100)
- 1 bag containing installation fittings
- 1 bag containing technical documentation (instruction manual, technical data, electrical diagram, exploded view and spare parts list)

MODULATION KIT

A modulating burner allows to adapt the power delivered according to the boiler/system requirements.
To obtain the modulating operation the installation of a power regulator and the relative temperature or pressure probes, chosen in accordance with the specific requirements of the installation.

To simplify the selection of regulator and probes ELCO offers specific kits. Alternatively, the customer can request the individual components.

Kit RWF50 with sensor

Description	Burners	Code
Kit GEP130 (water - immersion probe)	V2	3834039
Kit GEA130 (water - strap-on probe)	V2	3834040
Kit IEP130 (water - immersion probe)	V3	3834043
Kit IEA130 (water - strap-on probe)	V3	3834044
Kit LEP130 (water - immersion probe)	V4	3834047
Kit LEA130 (water - strap-on probe)	V4	3834048
Kit MEP130 (water - immersion probe)	V5 and V6	3834049
Kit MEA130 (water - strap-on probe)	V5 and V6	3834050
MIF001R (kit mounted in factory)	V2 to V6	3834251

Example:

Kit with immersion probe with working field limitation up to 130°C for water tube boiler, mounted in factory on a VG2.210 D

Kit GEP130
(water - immersion probe)
3834039

+ MIF001R
(kit mounted in factory)
3834251

Kit RWF55 with sensor

Description	Burners	Code
Kit LEP 130 (water - immersion sensor)	V5 and V6	3834602
Kit LEA 130 (water - strap-on probe)	V5 and V6	3834603
Kit LVA 16 (steam - pressure probe)	V5 and V6	3834604
Acc AQE21.02 (kit for using Kit LEP 130 on hot air generator)	V5 and V6	3834307
MIF001R (kit mounted in factory)	V5 and V6	3834251

Example:

Kit with pressure probe for steam boiler, mounted in factory on a VG5.950 DP

Kit LVA 16
(steam - pressure probe)
3834604

+ MIF001R
(kit mounted in factory)
3834251

RWF50 stand-alone and wiring kit

Description	Burners	Code
